

Socket & Receptacle Maintenance Test Kit

Provides everything needed to test, inspect and maintain your cables in one convenient kit.

All components come packaged in a heavy-duty lockable case.

The kit contains the tools needed to check the wear on sockets and receptacles.

The MKIT includes:

TPF - Test Pin Female is a No-Go gauge designed to check the wear on the aircraft receptacle pins. If the gauge slides over the appropriate pin a worn or loose pin is indicated and the connector must be replaced to prevent possible damage.

TPM - Test Pin Male is precision machine tool to test the cable plugs to ensure positive safe connections.

TG - Test Gauge to check the tension on cable plug. The scale reads the pull out forces on the cable pins.

CKIT - Cleaning kit includes cleaning brushes, swabs, contact lube and brush holder.
